Custom Presets

1.1.0

Custom Presets allow you to quickly insert lines, with pre-filled data, into a Block.

Two kinds of Presets exist: User Presets and Profile Presets. As their names suggest, User Presets are accessible too all profiles from a same user; Profile Presets are accessible only to a specific profile.

Creating Presets

To create custom Presets, first navigate to the Conversation named "USER_PRESETS" or "PROFILE_PRESETS".

In that Conversation, create a new Block. Name the Block with the following format:

[category]preset name

The name is important as it dictates how the Preset is displayed in the UI.

For example, if you name a Block "[Characters]Alice", it will create a button labeled "Alice", under a category labeled "Characters".

Inside the Block, add any lines you want, and fill in the data you want.

From that point on, anytime you insert that Preset in a Block, it will insert the same lines, with the same data.

Inserting Presets

To insert Presets in your dialogue, look at the bottom of the Main UI, where the buttons for inserting lines are. Click either the "USER" or "PROFILE" tab. Click any Preset button, and it will immediately insert the lines for that Preset.

Technical Details

The USER_PRESETS and PROFILE_PRESETS Conversations are never exported with dialogues. Instead, they are saved to files inside the user/profile folder.

If you want to copy or transfer Presets between profiles, simply copy/cut and paste the lines from one to another.
