DIALOGUE CREATOR

Dialogue Export/Import

1.1.0

The Export and Import Menus can be accessed from the Main Menu, through the ↑ (export) and ↓ (import) buttons at the top.

Export

The Export Menu displays a list of the Conversations in the opened dialogue. Click Conversations in the list to toggle whether or not they should be exported.

Four Export Modes can be chosen from if you are exporting to an existing file. If you are exporting to a new file, the export mode doesn't matter: all selected Conversations will be exported.

Replace → Replaces the entire file with the selected Conversations.

Update → Does not add missing Conversations to the file, but updates existing Conversations with fresh data from the selected Conversations. Does not delete other Conversations already in the file.

Add → Adds missing Conversations to the file, but does not update or delete other Conversations already in the file.

Add & Update → Combines Add and Update.

For example:

Editor:	File:	Replace:	Update:	Add:	Add & Update:
	Conversation A		Conversation A	Conversation A	Conversation A
Conv. B	Conversation B	Conversation B	Conversation B	Conversation B	Conversation B
Conv. C	Conversation C	Conversation C	Conversation C	Conversation C	Conversation C
Conv. D		Conversation D		Conversation D	Conversation D

Import

The Import Menu is very similar to the Export Menu, and also features a list of Conversations and an option to select an Import Mode.

The Conversation list, however, represents the Conversations in the file you are importing from. You can toggle which ones to import by clicking them.

The Import Modes are similar to the Export Modes as well, except that this time, Conversations in the opened dialogue will be added/updated/deleted *from* the import file:

Replace → Replaces all Conversations loaded in the editor with the selected Conversations from the import file.

Update → Does not add missing Conversations from the file, but updates existing Conversations with fresh data from the selected Conversations. Does not delete other Conversations loaded in the editor.

Add → Adds missing Conversations from the file, but does not update or delete other Conversations already in the file.

Add & Update → Combines Add and Update.

For example:

File:	Editor:	Replace:	Update:	Add:	Add & Update:
Conversation A		Conversation A		Conversation A	Conversation A
Conversation B	<i>Conv. B</i>	Conversation B	Conversation B	<i>Conversation B</i>	Conversation B
Conversation C	<i>Conv. C</i>	Conversation C	Conversation C	<i>Conversation C</i>	Conversation C
	<i>Conv. D</i>		<i>Conversation D</i>	<i>Conversation D</i>	<i>Conversation. D</i>
